

Abstract of the Disclosure

TIRE WITH TREAD OF RUBBER COMPOSITION
CONTAINING DIVERSE CARBON BLACKS

5

- The invention relates to a tire with a component composed of a rubber composition containing at least two diverse carbon blacks. In one aspect such tire is a heavy tire and such component is a tread for a heavy tire which contains at least two diverse carbon blacks to aid in providing an improved path for thermal conductivity for
10 a heavy tire with its relatively thick cross section such as, for example, its relatively thick tread.
